

One man Lok Blok placement

Fly solo the next time you build a lok blok wall. Use the Gater Grapple Lok Blok Manipulator.

The Gater Grapple Lok Blok manipulator gives you complete control when loading, unloading, installing, or placing 4000 pound concrete lok blocks.

The hook hydraulically opens and spring closes. When closed the hook mechanically locks and **under load cannot be opened.**

After the hook is closed on the lok blok attaching point, the operator lowers the stabilizers. With stabilizers down the operator can slew the lok blok from side to side, forty five degrees each way from center, tip it back and forth by using the bucket cylinder and rotate it a full, continuous three hundred and sixty degrees into any position

All functions have lock valves so when the lok blok is in the desired angle or plane it will remain there until further input from the operator.

After the lok blok is in position the operator releases stabilizers, slacks weight off the hook, opens hook, and returns to the lok blok pile for the next blok. All operations require the excavator operator only; no outside help is needed, making for a much safer and more efficient workplace.

The Lok Blok Manipulator is a certified lifting device requiring periodic recertification depending upon local regulations.

The Gater Grapple Lok Blok Hook can pick up 4000 pound lok bloks and rotate them three hundred and sixty degrees continuously. The Lok Blok Hook hydraulically opens and spring closes, when closed the hook mechanically locks and under load cannot be opened. The Lok Blok Hook enables one operator to load, unload, install, and place 4000 pound lok bloks with no outside help making for a safer and more efficient workplace.

The operator positions hook over lok blok attaching point, opens and, then lowers hook to align with attaching point, the hook closes then the operator lifts the block. The operator can then rotate block to suit the particular job and set down the block and unhook, unaided by outside help.

The Lok Blok Hook is offered in three power models, hydraulic, 12/24 electrical, and 12/24 electric radio remote.

The Gater Lok Blok Hook can be used on an excavator, forklift loader, zoom boom, hiab, crane, and overhead crane.

The Lok Blok Hook is a certified lifting device requiring periodic recertification depending upon local regulations.
