## MODEL 02

### Model 02

#### Gater Grapples Spider Grapple

The Arborist's Friend ... The AG12 Articulating Grapple is a remote controlled, multi-functioning hydraulic grapple equipped with a chain saw that allows arborists to prune trees safely and productively from the ground. Using hand held remote controls, the operator is able to step away from the machine to gain the greatest perspective on the work at hand. Then, controlling both the boom and grapple, he takes advantage of the 360 degree rotation plus 180 degrees of horizontal and vertical articulation to position the grapple anywhere on the tree, limited only by the boom's vertical reach. By activating a few more switches, he grabs, holds, saws and discards the limb while maintaining control of the cut piece. The grapple opens to 12 inches and closes down to 1-1/2 inches. The 16 inch chain saw is capable of making a 12 inch deep cut. The AG12 is designed for use on trailer mounted work platforms with articulating booms and typically 45 - 60 feet of vertical reach.

#### SPECIFICATIONS:

Model No: AG12

Grapple Opening

- Maximum: 12 in.

- Minimum: 1-1/2 in.

Rotation: 360 degrees continuous

Articulation:

- Wrist (vertical): 180 degrees

- Side to side (horizontal): 180 degrees

Chain Saw

- Bar length: 16 in.

- Depth of cut: 12 in.

Power source: 24HP Gas engine
